

Get the big ones with the great new **AMBASSADEUR** **10.000 C**

Retrieve with automatic speed regulator. Two different retrieve speeds regulated automatically by the pressure on the line. Works like this: When the fish pulls line the reel automatically switches from normal retrieve speed 1:4.2 to low - 1:2.5. When the fish doubles back it automatically switches back to 1:4.2 — this makes it easier to retrieve the line fast.

Two simultaneous braking systems — centrifugal brake and mechanical brake with precision adjustment — effectively preventing any backlash.

Free running spool — makes long, soft casts without backlash possible.

Soft and absolutely smooth star-drag tension with extra powerful drag. Handle with automatic anti-reverse.

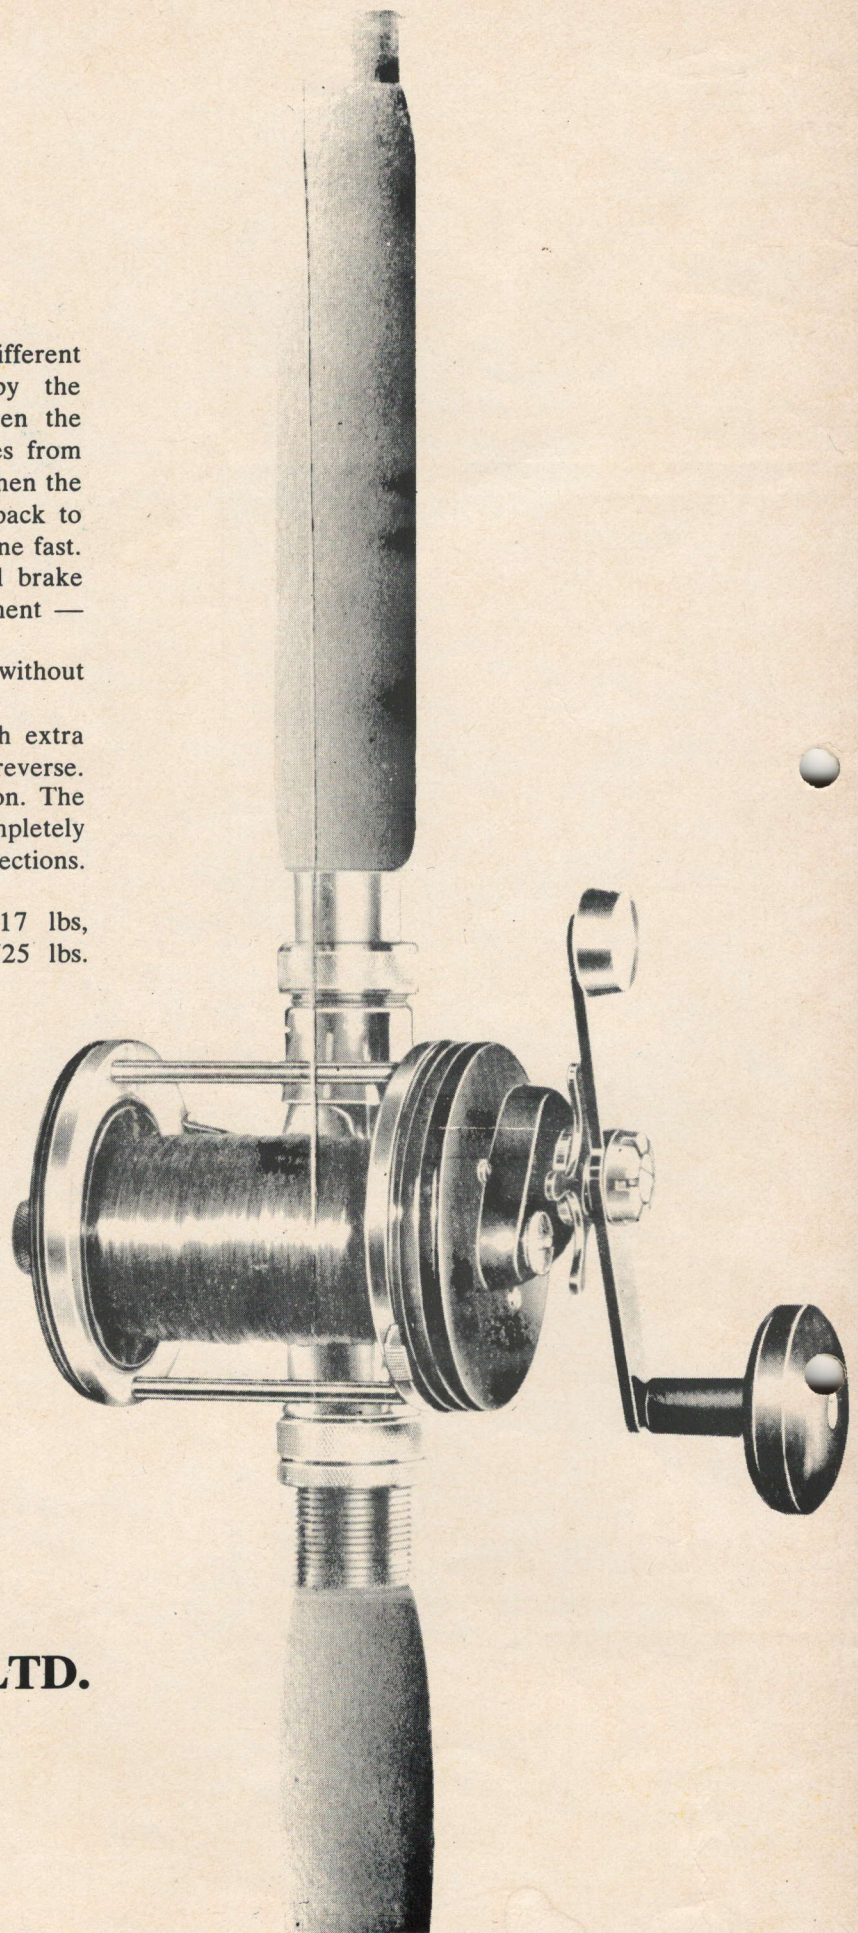

Mechanism of a fully new and unique construction. The inner working parts of the reel are completely separated from the spool in sealed side plate sections.

The spool contains:

760 yds. 0.40/15 lbs, 530 yds. 0.45/17 lbs,

440 yds. 0.50/20 lbs. or 290 yds. 0.60/25 lbs.

ABULON monofilament.
