ABU 501 (differences)

Renzo Di Paolo

I have several specimens of this particular closed face reel, produced by ABU since 1977, this date had not yet been ascertained, but lately I found a reel, which certifies the manufacture, even if for just one month, in December 1977 (see pictures 771200). The production will run until 1981. This article will mainly focus on the specimen in question which has a different mechanical, (never detected by any expert on the brand), which will be maintained until April 1978 (780401) see part list; after this date Abu had to change this configuration because the reels were defective in the handle-main gear transmission; originally this was secured with a mechanical lock achieved with a simple rivet that would have to avoid that the central fastening of the main gear nut loosen off, when subjected to stress. Personally I've repaired several reels with this problem and I still have a lot of spare parts replaced. The change regarding three particular: the main gear part. 9570, part of the drag washer. 5753, and the addition of a singular part of the conical spring washer. 9372. I conclude by presenting a particular ABU 501 that has always been part of my collection, already performed in other texts, which presents a special drawing on the cover. No doubt this example comes from the ABU, just notice the precision with which it is made. I wanted to publish it in hopes of getting information to corroborate my hypothesis.

RESERVDELAR 501

3909	Axelsäkring			6841	Spårryttare
5423	Vevmutter	12.5	2	6846	Lagerhylsa
5579	Spärrhake			6850	Tryckbricka
